

## CONSTRUCTION WATER

### Description/added value

In terms of a frictionless construction activity we offer to carry out the water treatment, at customer's option also as complete service inclusive dewatering. We implement approved and robust techniques with a modular configuration. Thus short delivery and installation times arise together with optimal and flexible reaction times to unexpected events during the construction activity.

### Our service

Delivery of pumping technique for the construction water treatment

Installation and operation of plants for:

- neutralisation (also with CO<sub>2</sub>),
- oil phase separation,
- sedimentation,
- cleaning of contaminated groundwater (VOC's, VC, aromatics, petroleum-derived hydrocarbon, chromate, phenol etc.).
